

'Make your own shaker'

Explore different materials inside the shaker to see if the sound becomes louder or softer.

Fill the bottle or container no more than halfway with your selected loose materials. To make filling easier, you can roll up a piece of paper to create a funnel.

Attach the lid to the bottle or container and secure with tape.

Time to decorate! Attach ribbons, stickers, colour etc while making sure you can still get a firm grip.

Things you will need:

- Empty bottle or container with a lid. It could be a soda bottle, Pringles can, pretzel tub, oatmeal container, etc.
- Heavy duty tape: masking, duct, or electrical.
- Loose materials that will make noise: dried beans, pasta noodles, rocks, rice etc.
- Items to use for decoration: ribbon, coffee filters, bows, stickers, etc.
